

analysis is used to achieve the decoupling of noise and structural information of the proposed algorithm in a self-learning way, which greatly suppresses the noise from being amplified. A large number of experiments have proved that this algorithm has good anti-noise performance and detail enhancement ability.

ACKNOWLEDGMENT

This work is supported by the science and technology plan project of Henan province in 2017. (NO. 172102210118).
