

A novel indoor positioning algorithm for textile sensor network based on received signal strength indicator filtering and improved Taylor series expansion.

Frequency domain signal processing with versatile feature combination.

A novel image enhancement technique for biomedical image detection.

A novel feature extraction algorithm based on textile sensor network.

A novel indoor positioning method for fast indoor location estimation of mobile terminals.

A novel feature extraction algorithm based on wavelet transform model.

A novel rapid target locking method algorithm for mobile terminal.

A novel indoor positioning algorithm for textile sensor network.

A novel feature extraction algorithm based on PSWT-M (Phase-Scale Wavelet Transform Model).

A novel indoor positioning algorithm for textile sensor network based on received signal strength indicator filtering and improved Taylor series expansion.

Frequency domain signal processing with versatile feature combination.

Visual cryptography for gray scale images
