High Performance Hybrid FOC-Fuzzy-PF Control for PMSM Drive.

Design of a New Duty Cycle Modulator to Improve the Quality of an Inland Production System.

An Empirical Methodology For Estimation of Renewable Power Production.

Filter for the Reduction of Harmonic Emissions Generated by Static Converters for Improving Control Effect with Worm Gearbox.

Parameter Tuning of BLDCM, parameter tuning, WOA, enhanced harmony optimization algorithm, multistage inverter, maximum power point tracking.

Evolutionary Multiobjective Methods Applied to Minimize the THD in Inverters: A Systematic Review.

Analytical Modeling of Low-Threshold TFTs Based on Low-Bandgap Semiconductors.

Contribution of Multilayer Inverters in Improving Electrical Energy Quality Study and Analysis.

Implementation of a Hybrid ANN-Based Filter for the Reduction of Harmonic Currents.

A Novel Multi-Source Model Predictive Current Control of Three-Phase Active Power Filter  

Design of a DC-DC Converter for a Grid-Connected Photovoltaic System  

Design and Implementation of Hybrid Piezo-Photon (PV) solar power plant in Muscat-Gahuku LMG  

Simulation of the connection in a threephase six-polar full-bridge of the existence a magnetic field  

Using adaptive second order sliding mode to improve power control of a converter-feeding wind turbines under grid disturbances  

A research on selection of appropriate indices under adverse system conditions for the assessment of voltage stability of an IED - IV power system  

Migitation of certain power quality issues in wind energy conversion systems using UPQC and BPFQ devices  

Hym of Legislative and normative act in the field of the environment, health and security of European electrical and electronic equipment  

Decentralized T-S fuzzy control for solar PV powered water pumping system driven by induction motor  

Characterization of switching transients in low voltage power systems of tea factories in Sri Lanka  

Power quality investigation by reduced switching EUPQ  

Calculation of optimal switching angles for a multilevel inverter using MM, PSO, and GA-a comparison  

Modelling and simulation of a mini scale solar wind system for a cross-flow turbine under grid connected photovoltaic system  

95 Aguinza-Álguacil, J., Jurado-M仍未完成，未完成，未完成，未完成，未完成。 https://doi.org/10.1080/15325008.2019.1680896

An EMT overcurrent protective relay based on ADALINE

Protection of transmission line based on the severity index using generation reshuffling strategy

Analysis on chaotic mechanism of direct-drive permanent magnet synchronous generators based on (j.mp.stability theory

Design of solar-powered aeration system for shrimp ponds of farmers in Thailand

Multi-unit multiplexer with dense field-effect transistors

An approach to manufacture small micro turbine with dense field-effect transistors

Study of kinematic system for solar tracking of a linear Fresnel plant to reduce and losses

An evaluation method for harmonic emission level based on principal component regression

Synchronous self-excitation induction generator

Sliding mode control of a grid-connected brazed double fed induction generator

Fractional order direct torque control of permanent magnet synchronous machines

Optimization of bisection matrix in modified newton-raphson algorithm for electrical resistance tomography

Wind turbine performance under fluctuating pressure gradient of laminar and turbulent air flows

Iterative learning synchronized control of multi-leaf collimator based on cross-coupled control

Iterative learning synchronized control of multi-leaf collimator based on cross-coupled control

Evolutionary array configuration under partial shading based on integer link matrix and harmony search

Evaluation of the control strategy performance for cascaded variable-speed wind turbine using different wind speed models at different load cases under unbalanced turbulence excitation

Comparison using express loading-based and expected heat allocation to corrective voltage level at primary distribution feeder

Decentralized power management of a hybrid microgrid consisting of solar panel and energy storage device

Decentralized power management of a hybrid microgrid consisting of solar panel and energy storage device
Research and applications of high-voltage pulse discharge crusting

High-Voltage Pulse Discharge (HVPD) crusting, engineering applications, flow impedance method, electrolytic effect method

Distribution transformer monitoring and reactive power compensation
